TTi Announces Strategic Partnership With Biolink Russia To Market IDenium Biometric Product Line within Americas

Newport Beach, CA. , April 4, 2007-TTi, a leading biometric and identification system supplier, and Biolink Solutions Russia, a leader in proven biometric algorithms and software, today announced an exclusive strategic partnership agreement to market a complete new line of biometric software and hardware.

The biometric product line the new partnership will launch is [IDenium](#), which is composed of several solutions based on server-client applications suitable for corporate networks of various configurations, including heterogeneous ones, such as terminal servers, thin and thick clients, those using global catalogues, etc.

The [IDenium](#) product line is based on server-client applications which are suitable for corporate networks of various configurations, such as terminal servers, thin/thick clients, and those using global catalogs. The first release includes IDenium for AD (Active Identity), the only AD biometric solution supporting a "one-to-many" identification mode which does not require any other parameters for quick identification. Designed for Windows NT/2000/XP, it allows users registered in one domain to get biometrically identified using their unique fingerprints, while accessing the shared network resources in the other domain.

The core of the system is the biometric server which stores the fingerprint databases and performs the biometric matching procedures. The key utility of IDenium for AD provides biometric information through using a fingerprint when logging-on to system operating systems. Another component allows for the replacing of passwords with fingerprint identification thus giving access to the protected applications and files. Our IDenium synchronization agent is responsible for sharing data between the AD and IDenium for AD application. Our [IDenium](#) Admin-Pac is designed to enroll new users and their fingerprints in the centrally located administrator workstation. Users can then enroll their fingerprints, all ten of them if desired, which is of vital importance if the user cuts or otherwise damages a finger-then he/she can submit another fingerprint and be successfully identified into the system.

The entire IDenium product line is characterized by its reliability, security, functionality, performance, efficiency, economic feasibility, and ease of installation and maintenance.

"We are very excited to announce this Partnership with Biolink. We believe the synergies between our 2 companies will enable us to focus on what we each do best. Biolink in developing & delivering state of the art proprietary biometric products based on their proven algorithms. TTI's focus on integrating & marketing these products into the Distribution Channels we have developed in the Americas" Chuck Weiglin COO TTI.

"We believe that partnering with an experienced US based company that has an experienced Sales & Mktg team will enable Bio-link to concentrate on our core competency of biometrics software

development. We are extremely excited about the business opportunity in the Americas & our Partnership with TTI" Piotr Pertsov

About TTI

Providing solutions to central & local government, corporate, retail, and security industries, Trijay Technologies International Corp. (TTI) combines proven biometric systems and secure identification technologies to satisfy any needed specific requirements. From OEM fingerprint modules, access control and T&A systems to complete national smart card, border and port security control and e-passport schemes, TTI's capabilities cover conception and design to implementation and complete customer service. TTI delivers some of the most technological and reliable identity management solutions available in the industry today. TTI focuses on strategies that are designed to manage costs, increase quality, mitigate risk, improve business agility, and strengthen security. For more information on TTI please call 949-309-4049, or visit our web site at www.trijaycorp.com

About BioLink

BioLink, a leading provider of biometric identification solutions, develops, manufactures, and markets advanced fingerprint biometric products. The Company's goods and services form the core of biometric identification and authentication solutions for all scale civil identification, access control and information security applications. BioLink's solutions provide the lowest total cost of ownership in the industry and are being implemented by corporate and government entities worldwide. For additional information, please visit BioLink's web site at <http://www.biolinksolutions.com>.
