IRIS Signs Contract with Trijay of USA for Supply of Mobile Smart Terminals

KUALA LUMPUR, 14th February 2007 - IRIS Corporation Berhad (IRIS) has entered into an agreement with Trijay Technologies International Corporation (Trijay) of United States of America to supply highly secured mobile authentication and verification mobile terminals.

The contract valued at USD 8.8 million over a period of 24-months, involves the supply of IRIS' mobile smart terminals, the ST4eX and ST4i. In the agreement, IRIS grants Trijay the exclusive right to promote and sell the ST4i model which supports the HID iCLASS contactless platform for 3 years.

The Windows.CE based ST4eX handheld reader is used for reading or verifying data in smart cards. The built-in Secure Access Module supports the use of digital keys for card schemes requiring high-security while the GSM/GPRS module provides mobility for high-speed data transfer and voice calls over mobile networks. The ST4i while maintaining the features of ST4eX handles iCLASS credentials from HID. The device can read/write to iCLASS-issue smart cards, read biometric fingerprint data, and enable validation of cards.

"We are delighted in entering into this partnership with Trijay. It further demonstrates IRIS' capabilities to deliver high security devices which are essential for the deployment of any identity-based management solution." said Dato' Tan Say Jim, Managing Director of IRIS.

“Trijay is pleased to be partnering with the world leader in handheld ID verification devices. This relationship will allow our channel to add mobile authentication or verification to their existing applications.” said Chuck Weiglin, Chief Operating Officer of Trijay.

About IRIS

IRIS Corporation Berhad is a global security end-to-end solutions provider with core expertise in Electronic Identification cards and Electronic Passport. Incorporated in 1994, it is the first company in Asia to set up a fully integrated manufacturing facility for Contact and Contactless Smart Cards, Contactless Document Inserts and assembled Module in Tapes and Reels.

IRIS pioneered the world’s first electronic passport in March 1998 for Malaysia and these technologies are deployed in many countries across the Asia, Middle East and Africa regions. Its products include a full range of smartcard readers, integrated terminals, card personalization equipments, biometrics scanners and border control system.

About Trijay

Trijay Technologies International Corporation (TTI) was formed as a California “C” Corporation in June 1993, with the intent of developing, producing and marketing a system for integrating fingerprint biometrics technology with transaction and ID card media. With this concept brought to the table by one of the principals, the company embarked on a research project to identify complimentary technology.

The management of TTI has actively worked with and pursued strategic alliances with organizations in the industry. These relationships have resulted in implementation, research, development and integration of card based, identity verification systems, data storage systems, and time & attendance systems for the government and private sectors worldwide.
